Achievements/Tasks

– JoyTree E-commerce Front-End

- As a front-end developer for JoyTree's e-commerce site, I built a user-friendly, responsive website using HTML,CSS,JavaScript, and React. The goal was to create a seamless shopping experience, accessible across all devices.
- Created a clean and intuitive layout, focusing on easy navigation.
- Ensured a seamless experience on all devices through responsive design.
- Optimized for fast load times, enhancing the user experience.
- Prioritized security to protect user data and enhance reliability.
- Used React to build reusable components , speeding up development and simplifying updates.

CERTIFICATES

C Programming Course (Infosys) (07/2024 - 07/2024)
(07/2024 - 07/2024)

In the C programming course at Infosys , I learned basics like variables, loops, and function. Through coding exercises and mentor support, my programming and problem- solving skills improved, helping me build a strong foundation for my career.

Naukri campus (10/2024 - 10/2024)

The Naukri Campus Certificate is awarded for completing job-focused skills training. it shows proficiency in skills like communication, problem-solving, and technical knowledge, enhancing job readiness and career opportunities.

PERSONAL PROJECTS

Bank Management System (Core Java)
(08/2023 - 09/2023)

- Developed a banking application for operation like account creation , deposits, withdrawals ,and fund transfers .
- Managed account type (savings , current) with unique details for each.
- Stored account data and transaction history using arrays and linked list.

Personal Portfolio Website (01/2024 - 02/2024)

- Structured content into section: "About Me," "Projects," "Skills," and "Contact."
- Styled using CSS with a minimalist design, customized fonts, and color schemes.
- Added JavaScript for smooth scrolling, animations, and form interactivity.
- Developed clean and well-organized code for maintainability.

Spam SMS Detection System (05/2024 - 06/2024)

- Created a system to detect and filter unwanted SMS messages.
- Integrated keyword filtering for common spam phrases like "urgent" and "limited offer."
- Included sender analysis to filter messages from known spam sources. Improved data privacy by reducing exposure to phishing attempts.
- Enhanced system adaptability to recognize new spam types over time.
